Testing Facilities Validation Testing

#	Task	Validation	Comments
1	When opening the Testing facilities map for coronavirus html page - the title is displayed, and search bar is located at the top of the page	When a postcode is typed into the search bar and the enter button is pressed on the keyboard, the suburb appears, and map is zoomed into the nearest suburb that the Testing facility is located. This information is correct	Search bar can input postcodes and outputs location of the nearest Testing facility to the inputted postcode
2	The marker on the map which represents the Testing facility has a pop-up box which shows the address, business or building name, hours of operation and type of Testing	The pop-up box displays address, business or building name, hours of operation and type of testing	The output that is generated is correct
3	Zoom buttons work how they are expected too	Clicking the + or - buttons zoom the map in or out	This works as expected
4	Map button and Satellite button show the different maps styles when clicked - defaults as Map	Map shows the interactive map in a map style and there is a drop-down button to toggle terrain on or off. Similarly, for Satellite there is a drop down for labels	All buttons work in the expected way
5	Dropdown button at the bottom of the screen has two options "Type" and "Hours" with markers in different colours corresponding to different categories - For "Type" it shows Drive-through or Walk-in. For "Hours" it shows 10 different business hour categories	"Type" dropdown is the default and when I select 3070 for example it shows a red marker which represents Drive-through, which corresponds to the legend that is at the bottom of the page. This is correct	This is working as expected
